The book is divided into five parts. Part I provides an overview of the neuropsychology of childhood epilepsy, including the epidemiology, etiology, and pathophysiology of the disorder. Part II reviews the neuropsychological effects of childhood epilepsy, including the effects on intelligence, memory, attention, language, and social cognition. Part III discusses the assessment of neuropsychological functioning in children with epilepsy, including the use of standardized tests, behavioral observations, and neuroimaging techniques. Part IV provides guidance on

the management of neuropsychological problems in children with epilepsy, including the use of medication, therapy, and educational interventions. Part V concludes the book with a discussion of future directions in research on the neuropsychology of childhood epilepsy.

Neuropsychology of Childhood Epilepsy: Advances in Behavioral Biology 50 is a valuable resource for neuropsychologists, child neurologists, pediatricians, and other professionals who work with children with epilepsy. This book provides a comprehensive overview of the neuropsychology of childhood epilepsy, as well as practical clinical guidance on the assessment and management of these effects.

Table of Contents
