- Physical Medicine and Rehabilitation Residents preparing for the certification exam
- Occupational Therapists and Physical Therapists seeking to expand their knowledge in rehabilitation medicine
- Healthcare Professionals looking to enhance their understanding of disability management and functional restoration
- Students pursuing advanced degrees in rehabilitation-related fields

Case: A 55-year-old male presents with a history of a left-sided stroke. He has difficulty with walking, balance, and upper extremity function.

Questions:

- What is the most appropriate rehabilitation approach for this patient?
- How would you assess his functional limitations and develop a rehabilitation plan?
- What are the potential complications and how would you manage them?

By working through this and other case studies, you will develop a comprehensive understanding of the rehabilitation process, from assessment and goal setting to intervention and evaluation.

"This case-based board review was an excellent resource for my certification preparation. The real-world scenarios and expert guidance helped me solidify my knowledge and develop the confidence to tackle the exam." – Dr. Jane Smith, Physical Medicine and Rehabilitation Resident

"As an occupational therapist, I found this review invaluable for expanding my understanding of rehabilitation medicine. The practical insights have enhanced my ability to collaborate effectively with other healthcare professionals and provide holistic care to my patients." – Ms. Mary Johnson, Occupational Therapist
